all EG BP

Bar chart titled "all EG BP". The x-axis is labeled $-\text{Log}_{10}q\text{-value}$ and the y-axis is labeled "Name". From top (longest bar) to bottom:

- Chromatin remodeling
- In utero embryonic development
- Positive regulation of canonical Wnt signaling pathway
- Blastocyst development
- Embryo development
- Regulation of stem cell differentiation
- Cellular response to hypoxia
- Stem cell population maintenance
- Sterol metabolic process
- Histone methylation
- Tumor necrosis factor−mediated signaling pathway
- Positive regulation of trophoblast cell migration
- Histone acetylation
- Regulation of morphogenesis of an epithelium
- Response to epidermal growth factor
